## **New 3.00 m XEOS PRO EVO seed drill: power and manoeuvrability**

*New 3.00 m XEOS PRO EVO seed drill on rotary harrow*

The 3.00 m XEOS PRO EVO is the new Sulky seed drill fitted with the 80 kg CULTIDISC drilling toolbar. This powerful seeding unit mounted on a parallelogram makes it possible to work in all conditions, from minimum tillage to drilling after ploughing. The robust design of this articulation-free drilling toolbar makes it possible to envisage high working speeds in the right conditions.

Lighter than its predecessor by 400 kg and fitted with a 1000-litre hopper, it provides great manoeuvrability even with reasonably powerful tractors.

The rear access and the new platform make loading and flow rate adjustment easy whilst leaving free access to the coulter units.

As standard the seed drill is fitted with an electrically driven metering device with a PILOT console in the cab.

As required the 3.00 m XEOS PRO EVO can be coupled to a Sulky Cultiline HR rotary harrow with 4 rotors to the metre or even to a Sulky Cultiline XR disc cultivation tool. The latter enables the working speed to be increased to 12-14 km/h in optimum conditions at the start of the season. At any time the two tools can be interchanged in several minutes to increase the versatility of the seed drill combination.

The 3.00 m XEOS PRO EVO is one of a complete range of seed drills fitted with the 80 kg Cultidisc drilling toolbar, with a working width of 3.00 to 6.00 m and a front hopper.
